SNOMED @ UZ Leuven

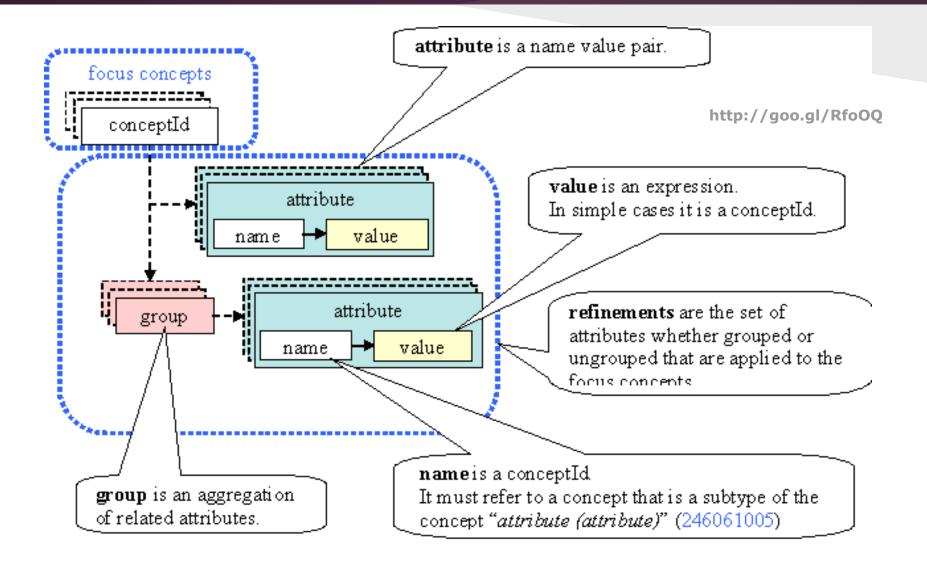

Bart Van den Bosch, CIO UZ Leuven

Why SNOMED?

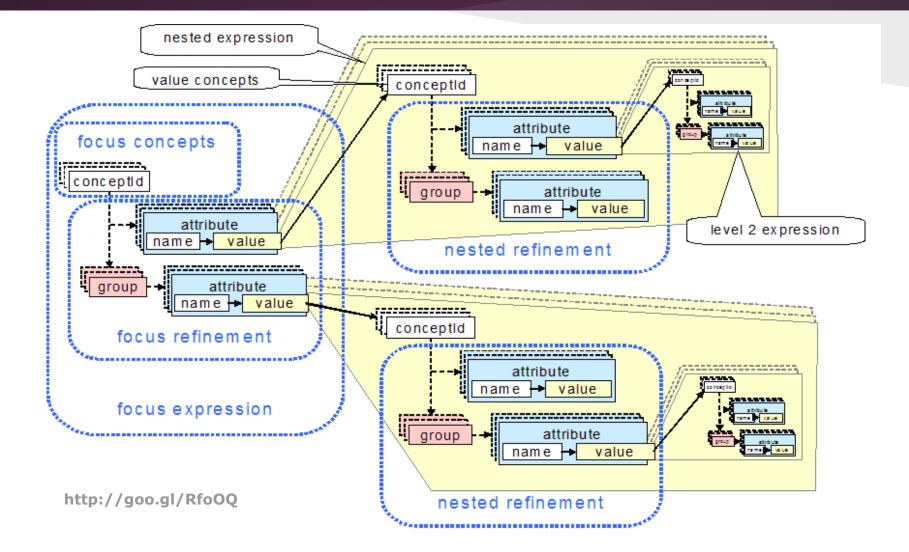

- Modern coding system, yet enough market traction
- Implements most of Cimino's desiderata

 <u>http://goo.gl/ocml8</u>
- Extendable through use of post-coordination
- Large knowledge graph
 - Can be used for searching unstructured data

SNOMED building blocks

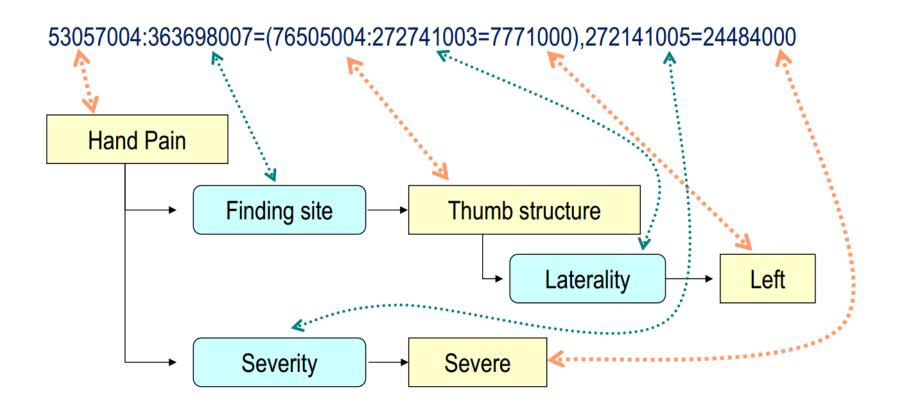

SNOMED building blocks

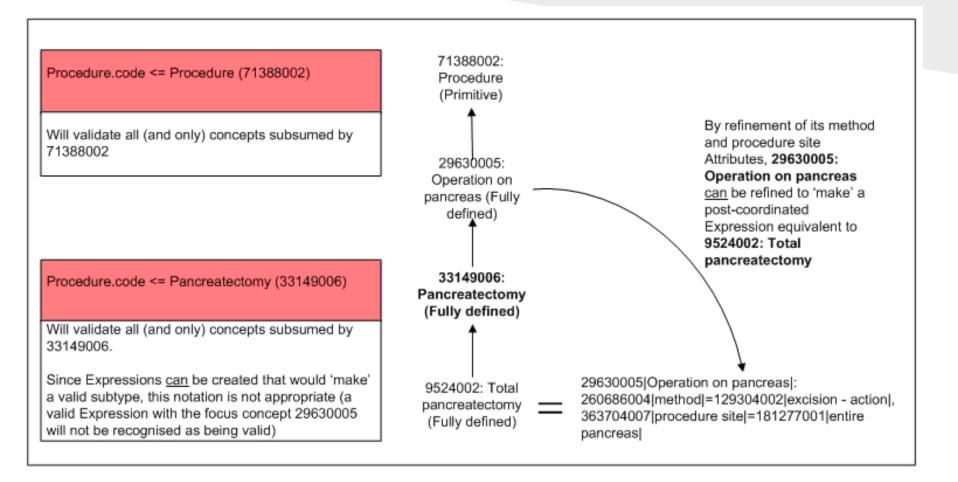

Compositional grammar

http://goo.gl/WxZl2

Compositional grammar mapped to diagrammatic representation

Post-coordination

What & Where

- First: problem list
- Make SNOMED the lingua franca for coding both diagnoses and procedures
- Granularity of coding
 - Determining a minimum level of coding for each specialty
 - This level is shown in the patient summary; click through to get more detail (coded or in full text)
- Optional: where codes are needed

Hurdles

- SNOMED is complex
- IT tools for coding absolutely necessary
- SNOMED browsers not readily commercially available
 - Some no longer supported
 - Others not embeddable in a clinical workstation
- UZ Leuven builds simple Nexuz SNOMED Browser
 - Prototype
 - Text based search (nothing fancy)
 - Embeddable version in the works
