

Meaningful use of EPR

MIM 26-05-2010

Herverlee

In Dorag, MD

definition

The meaningful use of EHRs intended by the US government incentives is categorized as follows:

Improve care coordination

Reduce healthcare disparities

Engage patients and their families

Improve population and public health

Ensure adequate privacy and security

Incentives: to providers who use IT

Strict and open standards: To ensure users

Shift of Mind?

From product oriented approach to a user oriented approach.

Financial support for users

ePR in and out patients

US administration supports ePR

From validating the system functionality to measuring its use.

Including clinical quality measurement in the evaluation process.

Based on a realistic medium long term vision.

Us: Goals and planning

Goal US	
Record +encoding +structuration +communication	2011
Decision support local level	2011
Quality measures	2011
Communication orders/results	2012
Decision support on National Level	2015
Self management tools for patient	2015

Meaningful use in Belgium: points to discuss

Goal US		Belgium Goals	
Record +encoding +structuration +communication	2011	Codification/ structuration Communication/ ·Inquiry 2007 ·Content and Semantic interoperability ·Hubs-Metahubs and minimal data set ·eHealthBox and (blind) communication ·Web-based software	2010-2011
Decision support local level	2011		
Quality measures	2011	Decision support: Cebam	2010
Communication orders/results	2012	Quality measures: Achil	2011
Inequalities		Communication orders: RECIP-E	2011-2012
Decision support on National Level	2015	Inequalities: MF-MAF, payment by third party	
Self management tools for patient	2015	Decision support on National Level	2011
		Self management tools for patient	?

Utilisation actuelle des applications informatiques dans le cadre de la pratique du médecin généraliste

Tous les répondants n=842

1. Codification et communication

Semantic interoperability

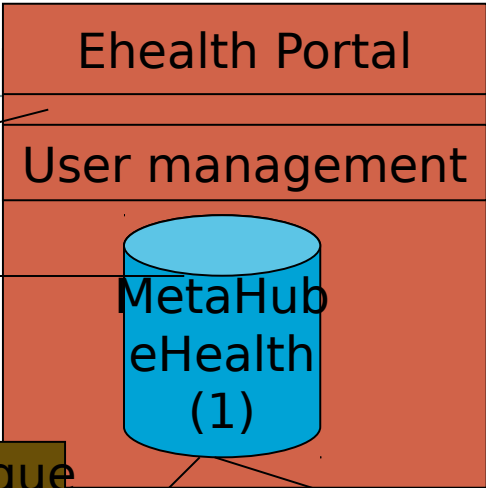

- Kmehr (longitudinal and transversal approach)
- ICD10-ICPC-Thesauri -(ICF) -(?) SNOMED
- >Semantic Platform VUB
- Minimal Dataset: Epsos

Data output

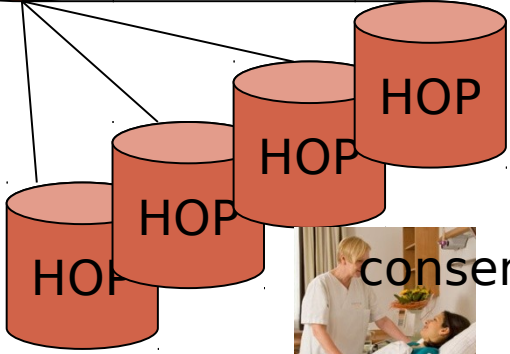

ticket

localisation

Ticket+relation therapeutique

Data input

Hubs and metahubs

From local to web based EPR

web based, saas

No versioning

No backup

Easy update of Sav

Easy change of doctor without changing of record

Training can be easier

Connectivity (from everywhere)

Easier multi-professional/exchange

US : Clinical quality measures

10

Preference is given to the quality measures endorsed by NQF (National Quality Forum):

Previous PQRI measures (Physician Quality Reporting Initiative) most important ones related to **chronic conditions (5) and prevention (9)**

RHQDAPU measures (Reporting Hospital Quality Data for Annual Payment Update).

84 different quality « indicators » listed for payment years 2011 and 2012 , regrouped per «specialty ».

Examples

% of diabetes mellitus patients (>18 and <75) with most recent HbA1c $> 9\%$ (NFQ59)

% of patients >18 with heart failure and LVSD who were prescribed ACE inhibitor or ARB therapy (NFQ81)

% of patients > 50 who received influenza immunisation from Sept. to Feb.

% of patients (>60 and < 80) who received appropriate colorectal cancer screening.

US examples

% of patients > 18 with new episode MDD (Major Depressive Disorder) and documented as treated with antidepressant medication during the entire 84 days acute treatment phase.

% of patients > 18 with POAG (Primary Open Angle Glaucoma) who have an optic nerve head evaluation within the 12 months.

% of patients > 18 with ischemic stroke or TIA with paroxysmal atrial fibrillation who were prescribed an anticoagulant at discharge.

Belgium: Achil

Quality Evaluation Platform for primary care

Codage data

Encryption message

Analysis by (ISSP-WIV)

Feedback to local networks and caregivers

Results to support decision

Only (as far as now) for diabete and Renal insufficiency

Conclusion

Same way, same goals, but no surprise, US much more ambitious

Physicians who become "meaningful users" of qualified EHRs and who accept Medicare patients could receive as much as \$44,000 over five years, starting in 2011. Physicians who have at least 30 percent Medicaid patients and are meaningful users of EHRs could receive \$63,750 over the five years.
